

AI Working Group Meeting Notes July 26, 2024

Meeting Recording Link:

[LINK]

Participants:

- Alec Summers
- Bob Heinemann
- Deana O'Meara
- Steven Christey
- Florencio Cano
- Gary Lopez
- Hyrum Anderson
- Raymond Pompon
- Ramesh Ambastha
- Sven Cattell
- Kevin Greene

Agenda:

1. CWE Version Milestones
 - a. CWE 4.16
 - b. CWE 5.0

Meeting Notes:

CVE Milestones

- CWE 4.16: Fall 2024
 - Could contain new AI entries, changes to existing entries
- CWE 5.0: early 2025 (a major release since 2020)
 - Might not directly affect AI WG activities
 - Major usability improvements
 - Other macro-level changes (TBD)
 - (likely) Significant schema changes

CVE 4.16 Possible Content Changes

- Update “non-AI” CWEs

- Analyze suggested observed examples and add to relevant CWEs
 - Will teach “weakness” thinking and mapping
- Review other suggested demonstrative examples and references that were not applicable to CWE-1426
- Add AI/ML as Applicable Platform to more CWEs
- Update AI-specific CWEs
 - Finish CWE-1426: Improper Validation of Generative AI Output
 - Improve mitigations (especially effectiveness)
 - Add demonstrative example and/or diagram?
 - Revisit vuln-mapping and maintenance notes if other new entries are provided
 - Update 2018-era CWE-1039: Automated Recognition Mechanism with Inadequate Detection or Handling of Adversarial Input Perturbations

Question: What is the most important aspect that should be prioritized?

- **Member:** This depends on feedback from chairs.
- **Questions:** What is top of mind for you? What is the top priority for the next thing that we tackle?
 - **Member:** What is the practical use? What’s the purpose? Figuring out the goal or purpose will add value and insight into what the organization wants out of this.
 - **Member:** I’m with you, we want to make this as digestible as possible. Curious as to what the rest of the group thinks?
 - **Member:** Common consequences. How we communicate to developers is important and falls under the broader scope.

New Submissions – Process Overview

- Stage 1: Initial Submission
 - Goals: clearly identify the weakness and address overlap/duplication
 - MITRE conducts initial review to give feedback
 - Submitter/AI WG addresses any critical issues during consultation
- Stage 2: Detailed Submission
 - Submitter / AI WG provides all detailed fields
 - MITRE reviews and consults to address any gaps or quality issues
- Stage 3: Content Generation
- Stage 4: Publication

New/Ongoing CDR Submissions

- Proposal: AI WG could make a new entry that touches on “basic” prompt injection
 - “Ignore all previous instructions”
 - Focused on “neutralization” (which is mitigation-agnostic)
 - Many overlapping submissions already
- Non-prompt-injection submissions
 - Need initial MITRE review
 - “Bias in AI Models
 - “LLM Bad Practices: Improper tuning of model control parameters”
